

**MATH 504**  
**EXERCISES 9**

A. ZEYİN

- (1) Determine if the following maps are ring homomorphisms or not. If yes, determine  $\ker(\varphi)$  and  $\text{im}(\varphi)$ .

▶ for any non-zero integer  $n$  :

$$\begin{aligned}\varphi_n: \mathbf{Z} &\rightarrow \mathbf{Z} \\ a &\mapsto n \cdot a\end{aligned}$$

▶ for any positive integer  $n$  :

$$\begin{aligned}\varphi_n: M_n(\mathbf{R}) &\rightarrow \mathbf{R} \\ M &\mapsto \det(M)\end{aligned}$$

▶ for any positive integer  $n$  :

$$\begin{aligned}\varphi_n: M_n(\mathbf{R}) &\rightarrow \mathbf{R} \\ M &\mapsto \text{tr}(M)\end{aligned}$$

▶

$$\begin{aligned}\varphi: M_2(\mathbf{R}) &\rightarrow \mathbf{R} \\ \begin{pmatrix} p & q \\ r & s \end{pmatrix} &\mapsto r + s\end{aligned}$$

▶

$$\begin{aligned}\varphi_n: M_2(\mathbf{R}) &\rightarrow \mathbf{R} \\ \begin{pmatrix} p & q \\ r & s \end{pmatrix} &\mapsto p\end{aligned}$$

- (2) Let  $\varphi: \mathbf{R} \rightarrow \mathbf{S}$  be a ring homomorphism. Decide whether the following statements hold true. If yes, give a proof, else give a counter-example :

- ▶ If  $u \in \mathbf{R}$  is a unit of  $\mathbf{R}$  (i.e. an invertible element), then  $\varphi(u)$  is a unit of  $\mathbf{S}$ .
- ▶ If  $\varphi(u)$  is a unit of  $\mathbf{S}$  then  $u \in \mathbf{R}$  is a unit of  $\mathbf{R}$ .
- ▶ If  $v \in \mathbf{R}$  is a unit of  $\mathbf{S}$ , then  $\varphi^{-1}(v)$  is a unit of  $\mathbf{R}$ .
- ▶ If  $r \in \mathbf{R}$  is a zero divisor then  $\varphi(r)$  is a zero divisor of  $\mathbf{S}$ . Is the converse true?
- ▶ If  $\varphi(u)$  is a zero divisor of  $\mathbf{S}$  then  $u \in \mathbf{R}$  is a zero divisor of  $\mathbf{R}$ .
- ▶ If  $s \in \mathbf{S}$  is a zero divisor then each element of the set  $\varphi^{-1}(s)$  is a zero divisor of  $\mathbf{R}$ .

- (3) Prove that  $\mathbf{R}[X]/(X^2 + 1)$  and  $\mathbf{C}$  are isomorphic.

- (4) Prove that the rings  $\mathbf{R}[X]$  and  $\mathbf{Z}[X]$  are not isomorphic.

- (5) Consider the polynomial  $p(X) = X^2 + 1 \in (\mathbf{Z}/3\mathbf{Z})[X]$ .

- ▶ Explicitly write each element of the ring  $R = (\mathbf{Z}/3\mathbf{Z})[X]/(p(X))$ .
- ▶ Show that  $R$  is an integral domain.
- ▶ Find the multiplicative inverse of  $X + (p(X)) \in R$ .
- ▶ By finding multiplicative inverses of remaining non-zero elements of  $R$ , show that  $R$  is a field. Deduce that  $(p(X))$  is a maximal ideal.
- ▶ Are  $R$  and  $\mathbf{Z}/9\mathbf{Z}$  isomorphic?

- (6) If  $\mathbf{R}$  and  $\mathbf{S}$  are two commutative rings with identity, we have defined a ring homomorphism to send  $1_{\mathbf{R}}$  to  $1_{\mathbf{S}}$ . Show that this need not be the case in general.

- (7) Show that if  $\varphi: \mathbf{R} \rightarrow \mathbf{S}$  and  $\psi: \mathbf{S} \rightarrow \mathbf{T}$  are ring homomorphisms, then so is  $\psi \circ \varphi: \mathbf{R} \rightarrow \mathbf{T}$ .

- (8) Let  $\varphi: R \rightarrow S$  be a ring homomorphism.
- ▶ Show that if  $J$  is an ideal of  $S$  then  $\varphi^{-1}(J)$  is an ideal of  $R$ . Show that  $\varphi^{-1}(J)$  contains  $\ker(\varphi)$ .
  - ▶ Show that if  $I$  is an ideal of  $R$  then  $\varphi(I)$  need not be an ideal of  $S$ .
- (9) Let  $R$  be a commutative ring with identity. Show that  $R$  is a field if and only if for any commutative ring with identity every non-trivial homomorphism  $\varphi: R \rightarrow S$  is injective.
- (10) Let  $R$  be a ring and let  $I$  be an ideal of  $R$ . Show that the canonical projection  $\pi: R \rightarrow R/I$  induces an order preserving one-to-one correspondence between ideals of  $R/I$  and ideal of  $R$  containing  $I$ .
- (11) Let  $R$  be a commutative ring. Show that  $(0)$  is a prime ideal if and only if  $R$  is an integral domain.
- (12) Let  $\varphi: R \rightarrow S$  be a ring homomorphism between commutative rings with identities. Show that if  $J$  is a prime ideal of  $S$  then  $\varphi^{-1}(J)$  is a prime ideal of  $R$ . Does the analogous claim for maximal ideals hold true?
- (13) Let  $R$  be a commutative ring with identity. An element  $r \in R$  is called nilpotent if  $r^n = 0$  for some  $n \in \mathbf{Z}_+$ . Show that if  $r$  is a nilpotent element, then  $1 + r$  is a unit of  $R$ .
- (14) Let  $R$  be a commutative ring with identity. Consider the ring of formal power series over  $A$ , that is

$$A[[X]] = \left\{ \sum_{n=0}^{\infty} a_n X^n \mid a_n \in A \right\}.$$

- ▶ Show that  $r(X) \in A[[X]]$  is a unit if and only if  $a_0 = r(0)$  is a unit in  $A$ .
- ▶ Show that if  $r(X) \in [[X]]$  is nilpotent, then  $a_n$  is nilpotent for all  $n \in \mathbf{Z}_{\geq 0}$ .
